All 16Gb adapters listed above support HPE Smart SAN value-add integration features with HPE StoreFabric B-series Gen 5 FC switches and/or directors from Brocade. These features simplify storage area network (SAN) deployment and orchestration, reduce the time required to diagnose issues and improve overall SAN resiliency and provide for quality of service. Specific features include:

D-Port Diagnostics, Fabric Assigned Port WWN (FA-WWN), Fabric-based Boot LUN (F-BLD), FC Ping, FC Trace Route, FDMI, Read Diagnostic Parameters (RDP), Link Cable Beaconing (LCB), Forward Error Correction (FEC), QoS (CS_CTL), Buffer to Buffer Credits (BB_CR)

All HPE-branded QLogic Fibre Channel adapters are designed with dual-port isolated ASICs. This ensures internal resources supporting traffic on each physical port are completely isolated from the other physical ports on the adapter. This design increases overall reliability and resiliency of the SAN connections. All 16Gb adapters listed above also support T10 Protection information (T10-PI) checksum when connected to HPE 3PAR StoreServ 16Gb FC arrays. This improves data integrity by ensuring data is validated end to end in the Fibre Channel SAN.
